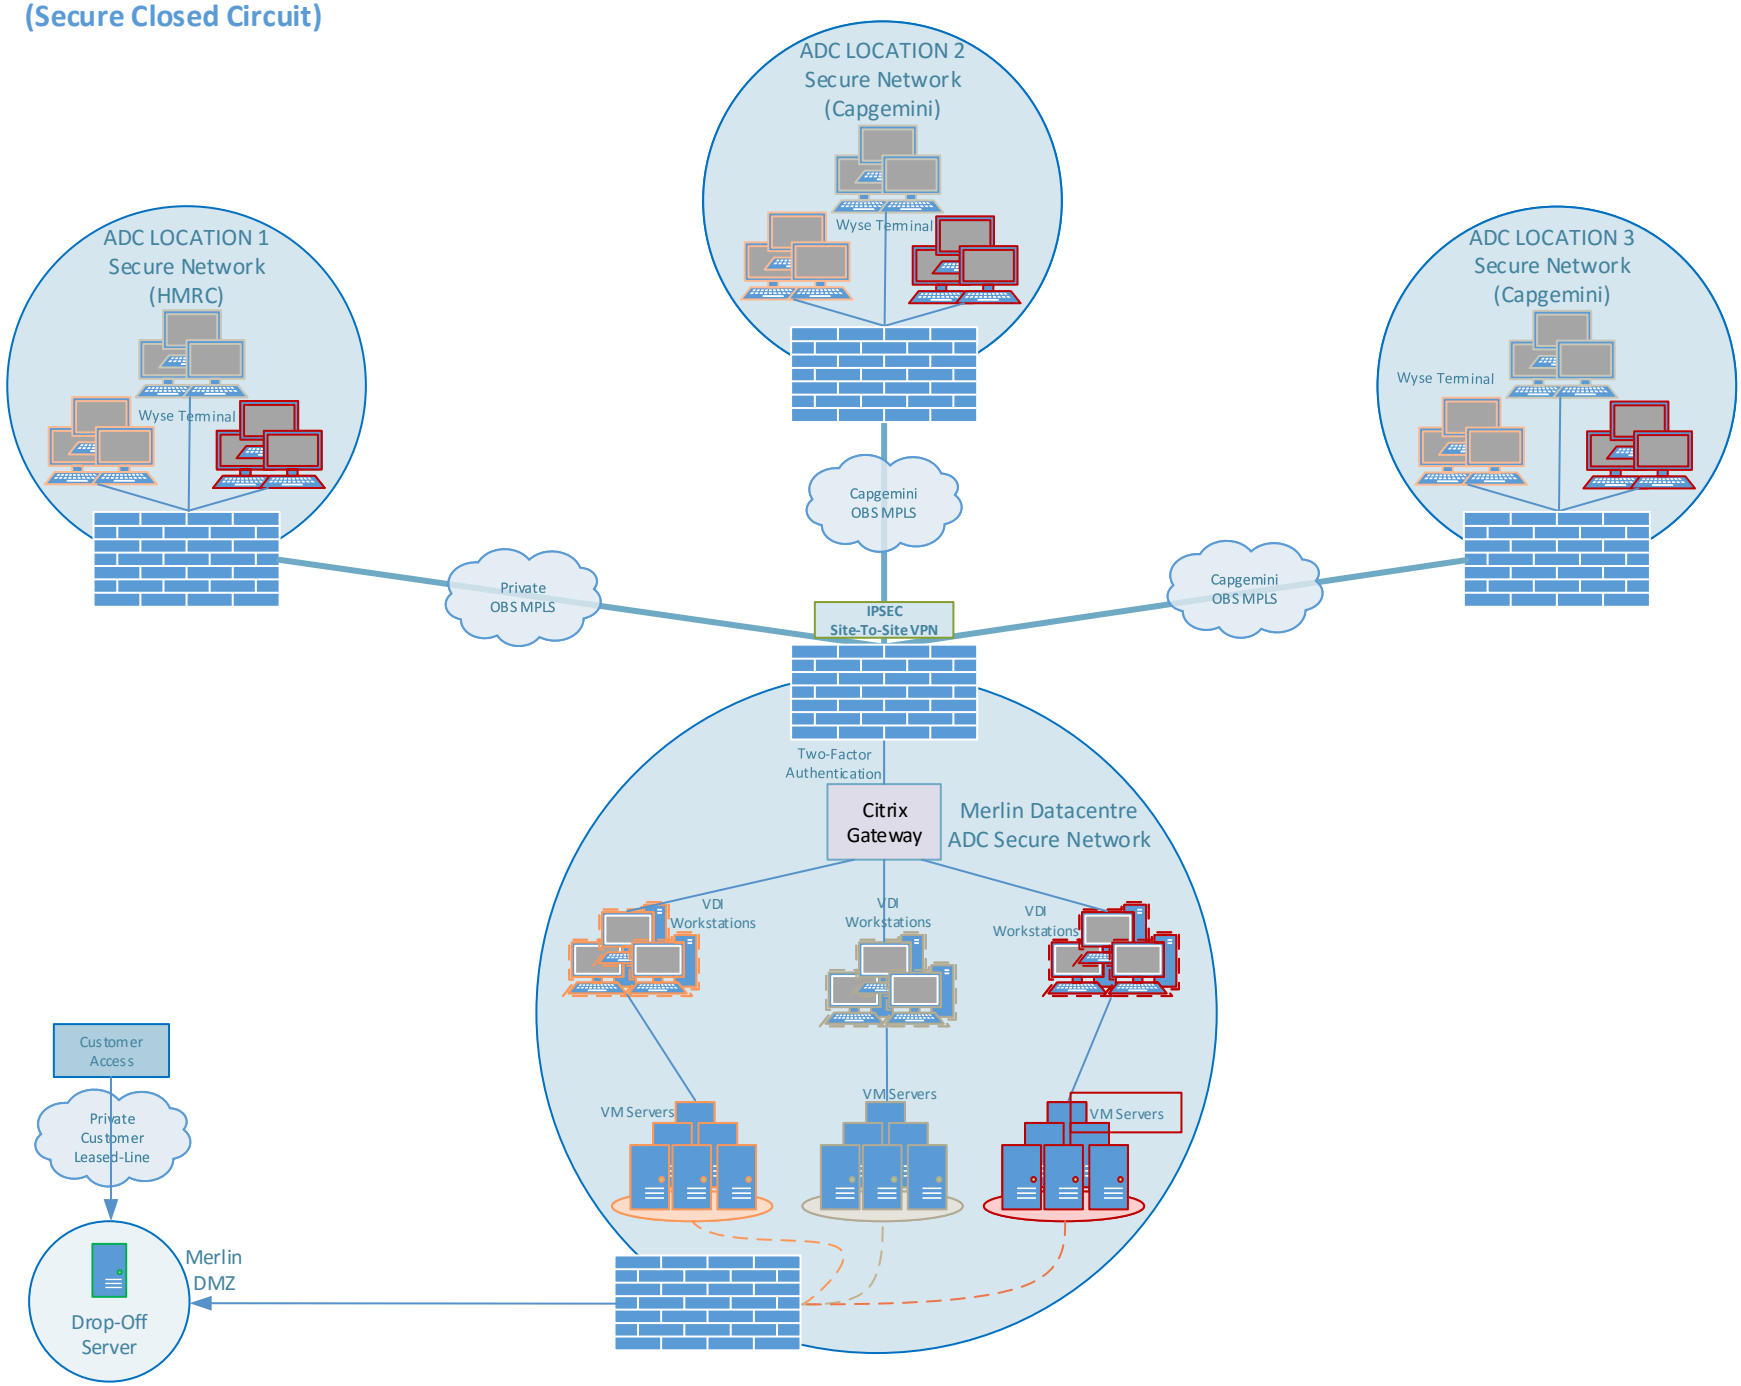
Scenario: ADC Merlin – Secure Citrix VDI/VM (Secure Closed Circuit)



The ADC provides a 'Secure Distributed Network' to HMRC. The end-user environments are located within secure rooms where Wyse-Terminals are used to platform Citrix connections to a high-security ADC VDI/ VM development and testing environment within the Capgemini Merlin Datacentre.

The entire operation is built, managed and maintained to exacting security standards and is subject to regular, externally sourced security audit and penetration testing.

The ADC is currenlty providing this secure network solution to DWP ADEP (HMRC).
