

Scenario: Remote Access to Site-to-Site VPN

The ADC is able to establish an IPSEC Site-to-Site VPN between any ADC location and customer or technology partner sites. We also offer an SSL-VPN Remote Access solution that allows users to connect to the internally housed IPSEC Site-to-Site Gateway, from off-site locations. This solution effectively allows the 'project' to operate from anywhere their users have access to a decent Internet connection, and without the need for any ADC office space. Two Factor (Token Based) authentication technology is available for both Capgemini and Non-Capgemini staff. The ADC has implemented this solution for several project engagements in the past. A current example of this solution in action, is the Mothercare operation.
